Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-27, 31-37, and 41-49, drawn to methods, pre-decoder, and system for adjusting the power dissipation in the processor core, classified in class 713, subclass 300.
- II. Claims 28-30 and 38-40, drawn to method and pre-decoder for ranking instructions in accordance with a criteria and assigning opcodes to the instructions based upon the ranking, classified in class 712, subclass 213.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as instruction prefetching, branch instruction processing, and parallel processing. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
